## **NO PAINT POLICY**

The complete line of high voltage instrument transformers manufactured by Ritz is designed to require no painting for corrosion preventative purposes.

All external housing and parts are of marine grade cast aluminum, fabricated aluminum or hot dipped galvanized steel.

Assembly hardware is either stainless steel or hot dipped galvanized.

External nameplates are of stainless steel.

The result of this policy is that Ritz CT's, VT's and CVT's require absolutely no maintenance (other than routine cleaning as dictated by environmental conditions) over the life of the transformer.
